Crossbow scopes

June, 2020

GENERAL FEATURES OF CROSSBOW SCOPES

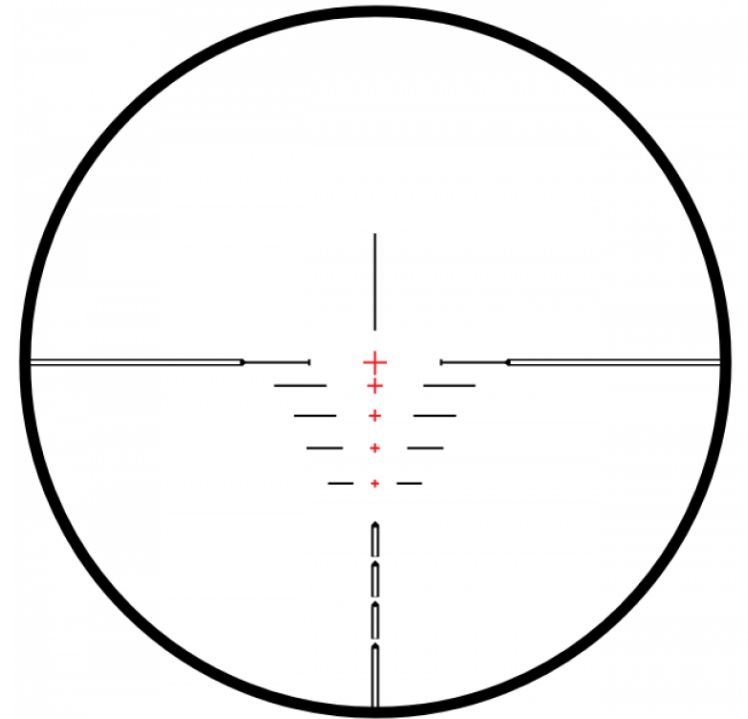

- Compact and light,
- 1-inch (25.4mm) tube,
- Objective lens diameter of 32–36 mm,
- Fixed or variable magnification,
- In variable magnification crossbow scopes, max. Magnification does not surpass 8x,
- Parallax is fixed, mostly at 30 m of distance,
- Eye-relief suited for crossbow use (around 70 mm).

RETICLES IN CROSSBOW SCOPES

- Dots or lines for the **arrow drop** (or both),
- Arrow is subjected to a **huge drop** even at close distances,
- A big portion of the reticle is illuminated (not just the centre).

MOUNTING ON CROSSBOWS

- The mounting platform (**Picatinny rail**) is located above the flight groove of the crossbow,
- Attachment of the scope with two **Picatinny rings**,
- A scope allows the user to be much more accurate.
