## Message From Our CEO, Marshall

Welcome to Primary Arms Optics for 2019

Now in our second decade of business, our focus remains unchanged: the best value, a commitment to innovation, and an unmatched dedication to customer service. We never lose sight of the end-user.

Our commitment to innovation in 2019 is evident in our patented ACSS reticle technology with new caliber-specific reticles for the popular calibers shooters love. New ACSS MIL and MOA reticle offerings give shooters the most flexibility ever offered in our ACSS lineup without sacrificing any of the advanced features that ACSS is known for.

The innovation continues in a big way with this year's introduction of the GLx Series of scopes. They are a breakthrough in technology, bringing a new level of sophistication to our optics lineup. All the new scopes in the GLx series feature our exclusive, patent pending turret design. These new turrets are constructed entirely from aluminum and steel. No brass internals. This means adjustment clicks will never wear down, remaining crisp and clear through a lifetime of use. Our all-new auto Zlock and Zstop systems are intuitive and advanced features, usually only found on optics that cost far more. Our all-new tier system for Primary Arms Optics makes it easy to identify the product category that fits the customer's needs.

The Platinum Series, PLx line features our high-end optics that go toe-to-toe with the best on the market.

The Gold Series, GLx is all new and brings quality and innovation unheard of in this mid-tier price point.

The Silver Series, SLx line is comprised of the Primary Arms scopes and red dots that we have always been known for. Combining outstanding performance with affordable accessibility for anyone.

The Classic Series, CLx line is perfect for classic shooting solutions, as well as for young or first-time shooters.

We're excited because we believe in what we make. We are a team of shooters, hunters, competitors, and firearms enthusiasts just like the folks who buy our scopes. We know that these new products for 2019 are going to bring more value, more innovation, and more fun to our customers, and we'll be there to serve them with excellence at every step. It's why we do what we do.

And now, in 2019, we're more equipped than ever to do it. Our new, state-of-art facility in Houston, Texas has given us room to grow - nearly 50,000 square feet of it - and that's what we intend to do. We hope you'll be a part of that with us.

Thank you,

Marshall Lerner, CEO

### Gold Series (GLx) Scopes:

The Primary Arms quest to bring our dealers and customers the best product possible takes a huge leap forward in 2019 with the introduction of our Gold series (GLx) scopes. Made in the Philippines using superior quality glass, advanced materials, and industry leading designs, GLx4 scopes showcase our latest developments in rifle optics technology. Patent pending Zlock™ and Zstop™ adjustment turrets and AutoLive™ motion sensing reticle illumination are highlights of these all new, clean-sheet scope designs. The GLx Series features some of our most popular ACSS® reticles.

### New Tier System:

So many new products will be released in 2019 that we are positioning our line of optics into four tiers to help you decipher them: Platinum (PLx), Gold (GLx), Silver (SLx), and Classic (CLx). Our Silver series (SLx) scopes are also receiving exciting new additions like the SLx8 1-8x24 FFP low power variable optic. These flexible scopes are ready to tackle a variety of real-world shooting challenges with speed and precision. New mid-size SLx series red dots will feature both standard dots and our famous ACSS reticles to enhance rifle capability out in the field.

### New Extreme Clamping System Scope Mounts:

Our ambitious project to engineer an all-new array of advanced scope mounts and scope rings has been a success, and the new Extreme Clamping System™ (ECS™) is ready for production. Engineered here in Houston and featuring USA-made steel hardware, ECS mounts can be safely and repeatably torqued to 65-in lbs, providing over 2,000 lbs of clamping force per cross bolt. One-piece mounts featuring up to three cross bolts are available in a variety of tube diameters, heights, and forward offsets, as well as traditional scope rings and micro red dot mounts. Primary Arms ECS mounts will set a new standard for toughness, with price tag that makes them accessible to every shooter.

### New Dealer Product Displays:

We have developed our own line of display stands and a display case to help our dealers showcase their Primary Arms inventory in the best possible way. Proudly presenting our brand name and scope features, these display items make a very favorable impression on buyers, whether they are looking to find our products or are encountering the Primary Arms brand for the very first time.

We are relentlessly pushing forward to bring the best possible optics products to market, to improve the shooting experience for our loyal customers, and to help our dealers to grow their businesses and our brand name. We invite you to join us.

We are taking our technology to a whole new level in 2019 with the introduction of the Primary Arms Optics GLx series.

Our experienced design and engineering team based in Houston, Texas pulled out all the stops for this all-new scope line. Real-world shooting priorities dominated their design process. We overcame tough challenges to answer the hard questions. The result is a technologically superior line of optics that will impress even the harshest critics.

**Tired of edge distortion and chromatic aberration?** We worked with our suppliers to source superior quality glass that helps to eliminate these common issues. GLx series scopes feature a flat, crisp field of view from edge to edge.

**Want a faster sight picture?** Our engineers made eyepiece considerations a major optical design priority for the GLx line, creating immediate and seamless access to the sight picture even at high magnification.

**How about that black border at the edge?** GLx series scopes utilize efficient mechanical and optical design, extending the image to the very edge of the scope body to nearly eliminate this common annoyance.

**Reticle illumination running your battery down?** Our new AutoLive technology turns reticle illumination off after three minutes of no motion. As soon as the GLx scope senses motion, it instantly turns itself back on to the previous illumination level.

**Looking for a compatible power ring mag lever?** No worries. GLx series scopes feature replaceable, customizable power ring fins and optional mag levers for quick magnification changes even with wet hands or when wearing thick gloves.

**Nervous about the adjustment turrets wearing out?** Our engineers replaced the traditional brass turret internals with stainless steel and used hardened steel for the click mechanism. This creates superior turret tracking and gives you the assurance that your clicks will never wear out. GLx series scopes feature the all-new, patent pending Zlock auto locking system, and the easy to set Zstop return-to-zero elevation knob. Low profile with an intuitive push button interface, and 100 audible and tactile clicks per revolution. We ensure that you will find them easy to reset, even while wearing gloves. And rotation indicators, yes, we added those as well! GLx scopes give you the most feature-packed turrets on the market.

Primary Arms has grown tremendously since our early days of selling red dot sights through online forums. With so many exciting new scopes planned for 2019 release, we wanted a better way for you to decide which optic is best for you. Here are the four tiers: PLx, GLx, SLx, and CLx. The first number or letter following that prefix refers to the zoom ratio of the scope—therefore each GLx4 scope has a maximum magnification that is four times greater than its minimum magnification. Fixed magnification products like the new SLxZ-25 red dot have zero zoom magnification. The new tier system makes sorting through our rapidly expanding variety of products easier than ever.

**Platinum PLx**  
The Platinum Series are our flagship scopes manufactured and assembled in Japan with superior glass clarity and the best materials available. Advanced yet intuitive scope body features maximize the capability of the latest ACSS reticles found inside. Our PLx line stands toe-to-toe with leading low power variable and precision rifle scopes offered by other brands.

**Gold GLx**  
Our all-new Gold Series, engineered in Houston, Texas are constructed in the Philippines to our engineers' exacting standards. Packed with the latest technology and upgraded materials, GLx scopes provide elegant, intuitive solutions to classic challenges that every precision shooter must face.

**Silver SLx**  
The Silver Series optics are the heart of our lineup. These are the trusted optics that have built our reputation through the years. Although many SLx optics will be familiar to Primary Arms fans, we are always pushing forward with new generations and adding even more options in response to the demands of our loyal customers.

**Classic CLx**  
Classic Series proves that entry-level optics don't have to be poor quality optics. Unlike some other brands, we don't use the word "value" as a euphemism for "junk". CLx scopes are perfect for the budget conscious and the new shooter. We take the time to 100% inspect every product in our facility here in Houston to ensure you are receiving the best quality product as our other three tiers. These scopes are backed by the same excellent customer service and support as all other Primary Arms products.

# WHY ACSS?

The Advanced Combined Sighting System (ACSS) is all about giving you the information to make a smart decision about where to aim, then providing you with the ability to immediately take your best shot using visual cues, all while looking through the scope and ready to fire. There is no need to do math or count clicks on scope adjustment knobs. Once your rifle is properly zeroed, you will be able to engage quickly and accurately at a wide variety of distances and shooting situations while looking through the scope the whole time. Various ACSS reticles are each optimized for specific shooting applications, but generally include features like:

**1. Center Chevron**

The center chevron is larger overall than a center dot, resulting in faster acquisition by the human eye, yet it provides an infinitely small aiming point that never obscures the target, creating superior precision as well.

**2. Bullet Drop Compensation (BDC)**

Our built-in BDC ladders provide caliber-specific holdovers allowing for target engagement at multiple ranges without doing any math or adjusting the scope. Fine tuning the initial zero adjusts for variations in ammunition type, barrel length, altitude above sea level, and other factors affecting bullet trajectory.

**3. Wind Holds**

Wind hold dots are arranged to the left and right of the BDC hash marks, compensating for crosswinds. The ability to compensate for shifting winds in real time without turning a windage knob is a huge advantage in speed and ease of use in the real world. Our ACSS reticles offer crosswind compensation from 5mph to 20mph, depending on the reticle.

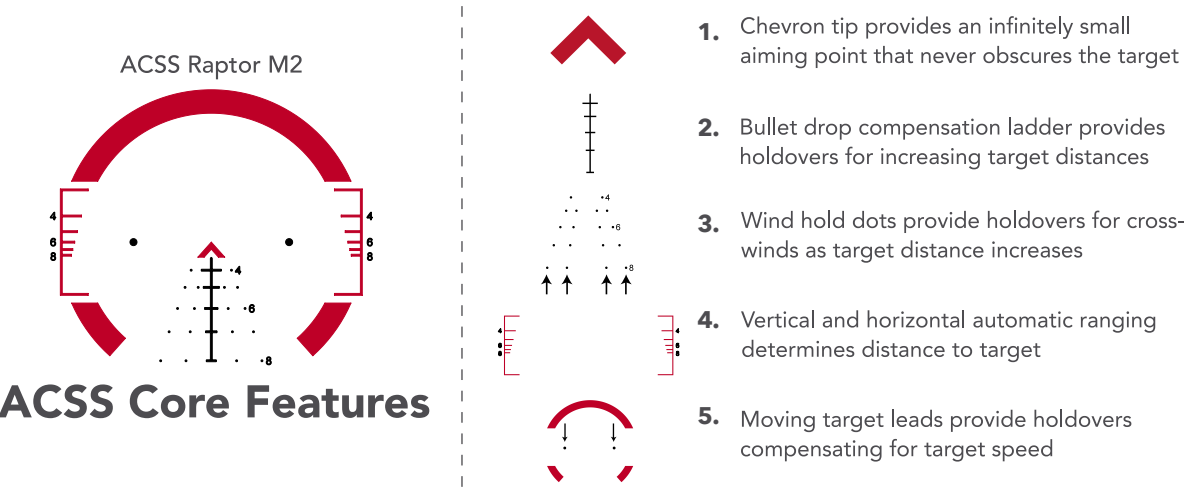

**4. Range Estimation**

Incorrect range estimation is the number one cause of missed shots under field conditions. Auto-ranging bars measuring the target's height and width are calibrated for common target sizes. They allow shooters to estimate range reliably and quickly while looking through the scope, without laser range finders or crunching mathematical formulas.

**5. Moving Target Leads**

Moving target lead dots help shooters deal with these most challenging targets. They are highly effective on targets moving perpendicular to the shooter from 100-300 yards. ACSS HUD DMR reticles specialize in moving target compensation, providing auto-ranging and moving target compensation for different target speeds all the way out to 600 yards.

ACSS reticles vary widely in appearance and complexity but share this in common: everything you see in the reticle is there for a carefully chosen purpose that has been tested and proven under field conditions. The shooter's brain quickly learns to find the parts of the reticle that are pertinent to solving the task at hand, and ignores the rest, like a pilot using a heads-up display to fly a fighter jet.

# RIFLE SCOPES

We have come a long way in a relatively short time, and for 2019 Primary Arms reinforces our reputation with new rifle scopes that are some of the best we have ever offered. We are tremendously proud to offer durable, affordable rifle scopes that directly address the most important issues that rifle shooters face out in the field. Our rifle scopes get the job done—and now you have more great options to choose from than ever before.

PLATINUM

PLx5 6-30x56FFP  
FIRST FOCAL PLANE

The Platinum Series PLx5 6-30x56 FFP rifle scope is our premium-grade precision rifle optic, optimized for medium-range to extreme-long-range use on large caliber rifles. With top-of-the-line Japanese glass, high quality materials, and precision engineering, the Platinum series is constructed with uncompromising craftsmanship, durability, and optical clarity. We offer the PLx5 6-30x56 model in five reticle options, each tuned for specific long-range shooting strategies. The PLx5 6-30x56 FFP rifle scope is going to be your new go-to optic to get the job done fast at 1,000 yards and beyond.

Exit pupil: 8.2 mm - 1.9 mm	Click Value: 0.25 MOA / 0.1 MIL
Eye relief: 3.3" - 4.0"	Length (w/o Lens Covers): 14.3"
Field of view: 16.6 feet @ 100 yards at 6x	Weight (w/ Included Battery, w/o Lens Covers): 38.2 oz.
3.3 feet @ 100 yards at 30x	Partial or full reticle illumination in red

GLx4 2.5-10x44FFP  
FIRST FOCAL PLANE

The GLx4 2.5-10x44 FFP rifle scope is our all-new medium magnification optic, optimized for precision shooting and long-range hunting. Our GLx4 scopes are packed full of advanced features. Premium glass, elevation rotation indicators, rubberized eyepieces and illumination controls are all included. With our patent pending Zlock and Zstop adjustment turrets and AutoLive motion sensing reticle illumination you have one of the most feature packed rifle scopes on the market. We offer the GLx4 2.5-10x44 FFP in five reticle options, each with smart ACSS or traditional Mil-Dot / MOA reticles. This scope redefines what can be accomplished when the latest optics technology is applied to meet the shooting challenges you face out in the real world.

GLx4 4-16x50FFP  
FIRST FOCAL PLANE

The GLx4 4-16x50 FFP rifle scope is our all-new high magnification optic, optimized for precision shooting and long-range hunting. Our GLx4 4-16x50 scopes are packed full of features. Elevation rotation indicators, premium glass, rubberized eye piece and illumination controls are included. When it comes to a feature packed rifle scope on the market today, we can't be beat with our new patent pending technology that we incorporated into this scope: Zlock and Zstop adjustment turrets and AutoLive motion sensing reticle illumination. The GLx4 4-16x50 comes in five reticle options, each with a smart ACSS or traditional Mil-Dot or MOA reticle. The GLx4 4-16x50 FFP magnification range is ideal for precision semi-auto rifles and bolt action rifles where targets from 100 to 800 yards must be engaged quickly and cleanly.

GLx4 6-24x50FFP  
FIRST FOCAL PLANE

The GLx4 6-24x50 FFP rifle scope has all the new technologies of our other two GLx scope options. This one is optimized for precision shooting at long to extremely long ranges. The GLx4 6-24 x50 FFP model is available in five variants, featuring smart ACSS, MIL/MOA grid, or traditional Mil-Dot or MOA reticles. The GLx4 6-24 x50 FFP scope body gives you maximum useable magnification in a package that is still convenient to mount on bolt action rifles without the need for high rings and an adjustable stock. The GLx4 6-24x50 is an excellent choice for precision engagement of targets out to 1,000 yards and beyond.

SLx6 1-6x24FFP  
FIRST FOCAL PLANE

We’ve brought the power of the ACSS reticle system to our first focal plane 1-6x low-power variable scope. This high-performance scope body features the FFP-specialized ACSS Raptor reticles. Acquisition is lightning-fast at low power, and shooters can take full advantage of the advanced reticle features throughout the higher magnification settings. Our SLx6 1-6x24 FFP scopes give shooters the power to take faster, smarter, more accurate shots than ever before, whether at close quarters or medium range.

SLx6 1-6x24SFP  
SECOND FOCAL PLANE

Simplicity and ease of use are paramount for many shooters. Our SLx6 1-6x24 SFP scope features a variety of ACSS reticles that give shooters quick and intuitive information so they can shoot better, faster and easier. The ACSS system has been heralded as one of the best reticle systems available today, combining bullet drop compensation, target range estimation, wind holdovers and moving target leads into one simple-to-use reticle. Housed in our Gen III scope bodies, these second focal plane scopes are built to stand up to the abuses of the field while being affordable for most anyone. No matter the shooting needs, preference, or budget these scopes give shooters the power to shoot smarter.

SLx8 1-8X24FFP  
FIRST FOCAL PLANE

The new SLx8 1-8x24 FFP scope bridges the gap between our SLx6 1-6x24 FFP scopes and our Platinum Series PLx8 1-8x24 FFP scopes. Customers have been asking for it, and here it is. We designed this all new optic from the ground up. A robust, foldable mag lever with customizable length is offered for sale separately, interfacing directly with the scope's power ring rather than wrapping around it. If you want the extra magnification of a 1-8x low power variable but our Platinum Series is out of reach, this is the scope for you.

FFP

SLx8 1-8X24SFP  
SECOND FOCAL PLANE

Our SLx8 1-8x24 SFP scope boosts maximum magnification to 8x in a package similar in size and weight to our SLx6 scopes. Available with the standard ACSS 5.56 and ACSS Griffin-MIL-Multi-Caliber reticles, these scopes are popular with shooters who want it all—excellent speed up close, plenty of magnification for medium range shooting, red reticle illumination, and a lifetime warranty.

SLx3.5 4-14x44FFP  
FIRST FOCAL PLANE

When we set out to make the first ever Primary Arms rifle scope in a first focal plane configuration, we wanted to offer an incredibly useful and affordable optic solution that could exceed the expectations of any hunter, marksman, or competitor. Our SLx3.5 4-14x44 FFP scope checks those boxes and then some. With reticle features that remain accurately calibrated at all magnification levels, tough construction, and a three-year warranty, this scope provides incredible performance for your dollar in any application. Choose a reticle that suits your needs whether you prefer MIL-DOT or MOA systems, or one of our patented ACSS reticles calibrated to provide bullet drop compensation, target ranging, wind holds and moving target leads for popular calibers.

CLx RIFLE SCOPES

CLASSIC

1-4x24SFP  
SECOND FOCAL PLANE

Our 1-4x24 SFP scope is a simple and effective low-power variable optic that's built to the tough standard of all our optics. A simple duplex reticle with illuminated dot is fast and easy to use - just point and shoot - and the adjustable ocular gives anyone a crisp sight picture every time. This scope was made for the target shooter, hunter, or 3-gun competitor that needs speed and performance but doesn't want to blow the budget. Shooting in all conditions is no issue for this scope, as we've illuminated it through 12 brightness settings. 1/2 MOA finger-adjustable windage and elevation knobs help you make adjustments quickly and accurately in the field, on the range, or in competition.

DUPLEX

SKU: PA14X  
MPN: 610001

3-9x44SFP  
SECOND FOCAL PLANE

Our 3-9x44 SFP scope sets the standard on a timeless design. A classic cross-hair duplex reticle is a time-tested firing solution for any application. Perfect for rimfire rifles or centerfire cartridges up to 5.56 NATO, this scope will elevate your shooting experience above and beyond any other entry-level scope on the market. Our sight picture is large, crisp and clear, with an extremely generous eye box for quick target acquisition. All these benefits packaged in a dependable, tough scope body make this Primary Arms scope one of the best values on the market.

DUPLEX

SKU: PA3-9X44SFP  
MPN: 610053

4-16x44SFP  
SECOND FOCAL PLANE

The MIL-DOT system is used by thousands of shooters and hunters to effectively find a firing solution for any caliber or ammunition at a wide variety of ranges. We've applied this versatility to our 4-16x44 SFP scope and added full reticle illumination for visibility in all conditions. With top-quality features like zero-resettable locking turrets that provide tactile and audible adjustment feedback, a parallax adjustment knob for accuracy at longer ranges, and excellent glass clarity, we believe this scope is the best value on the market, dollar-for-dollar, and we're proud to bring it to you.

MIL-DOT

MPN: 610054

6x32  
SECOND FOCAL PLANE

Every shooter loves the simple joy of plinking. Maybe you even learned to shoot by knocking soda bottles off the fence with a .22LR rifle. We know that simple joy and we've made it easier than ever to share it with your friends and family by bringing the power of the ACSS system to your .22 caliber plinking rifle. ACSS combines bullet drop compensation with range estimation, wind holds, and target leads in a simple reticle design. The ACSS 22LR in our 6X SFP rifle scope is designed to range targets like soda bottles and cans, sporting clays and other small targets, and give you bullet drop compensating points of aim out to 200 yards.

ACSS-22LR

Scope University is a recurring series of articles discussing everything there is to know about scopes, from “which is best” head-to-head battles to instructional how-to pieces giving you our best tips and tricks. Always fresh, never dull. Come check it out!

## DO YOUR HOMEWORK - PREPARATION AT HOME

A successful sight-in session starts at home, not at the range. When mounting your scope, take your time and do it right. Be safe—make sure your rifle is unloaded, don’t even leave any ammunition lying around your work area at all. Unless you need to check for fitment issues with a bolt action rifle, just leave the bolt or BCG out of the rifle entirely to ensure safety. Make sure the scope’s position is correct in relation to the placement of your eye when you take up a firing position. Shooting from the prone position tends to place your head further forward on the stock than shooting while sitting or upright, so some compromising may be involved for a rifle that will be shot from multiple positions. If you are tilting your head or straining your neck to look through the scope, adjust its position in the mount. If the scope has an adjustable ocular, use it to make the scope’s reticle as sharp as possible for your eyes. You want a clear view through the optic from edge to edge, with no “shadows” dancing around while you are in a comfortable firing position behind the rifle. If a major problem with the scope’s location is preventing this, you may have to research purchasing new rings or a different mount entirely.

You also need to ensure that the scope is vertically true and not “canted” or tilted left or right. A canted scope will cause your adjustments later to get very complicated. Windage adjustments will inadvertently bring the point of impact slightly up in one direction, then down again in the opposite direction. Elevation adjustments will slightly affect the point of impact left and right. Zeroing a scope that behaves that way will make you shake your fist at the heavens, but it’s easy to avoid. There are several affordable tools available, from bubble levels to shims, that can eliminate this potential trouble as you mount your scope to the rifle.

*Zeroing Hack: Get a brightly colored line of string or yarn and tie one end to a reasonably heavy object, like that old mil-spec stock you have lying around. Tie the other end to a tree branch or another object that lets the object hang freely straight down on the string. You have just made a rudimentary plumb line. This is how the ancient Egyptians referenced true vertical lines as they built the pyramids, and it still works today. Looking through your scope, with your rifle unloaded and as vertically true as possible, compare your scope’s reticle with the vertical line of the string. If your scope isn’t straight up and down, you’ll be able to tell instantly, all for the price of a piece of string.*

## GET BORE-ING - BORE SIGHTING

It’s time to hit the range! Bring some sight-in targets that incorporate 1” squares, a ruler or measuring tape, a calculator (there’s one in your cell phone already), binoculars or a spotting scope if you have one, and a method of fully supporting your rifle. While it’s possible to sight in using a bipod and sandbags, or with the handguard resting on a pile of ammo boxes, that’s not ideal. A bench mounted shooting rest, like a Caldwell Lead Sled, assists greatly in helping you hold the rifle perfectly still on target. A laser boresight can be a bunch of help but isn’t strictly necessary. The laser is either mounted at the end of the barrel or chambered like a round of ammunition. Spotting the laser through the scope and adjusting the reticle to the laser’s position on target isn’t a substitute for firing live ammunition, but it helps as a starting point to ensure your first rounds will land somewhere on the target. You’ve done everything you can to set yourself up for success. It’s time to send rounds downrange.

<https://www.primaryarms.com/blog/how-to-zero-like-a-hero-sighting-in-your-rifle>

Primary Arms prism scopes are proven performers when you want a simple, tough, compact scope that does it all. These fixed magnification scopes feature etched, smart ACSS reticles that are always present even with the illumination deactivated. Featuring modular 1913 MIL-STD mounts, they are perfect for AR-15s right out of the box and can be easily adapted to other rifle systems.

1x20 PRISM  
WITH ACSS-CYCLOPS

Our 1x20 Prism Scope offers an advantage over traditional red dots for many shooters and in certain situations. This tough, yet very compact optic features an etched ACSS reticle that can be illuminated all the way up to daylight bright, yet is still useable with illumination turned off. The 1x20 Prism Scope features a removable base compatible with industry standard microdot mounts. The adjustable ocular allows each shooter to set the reticle focus perfectly for their eyes, allowing extremely fast yet accurate sight acquisition at close range with both eyes open.

FINISH:

1x20 COMPACT PRISM SCOPE

Exit pupil: 13 mm	Length (w/o Lens Covers): 4"
Eye relief: 3.7"	Weight (w/ Battery, w/o Lens Covers): 9.7 oz.
Field of view: 76.3 feet @ 100 yards at 1x	Full reticle illumination in red, visible in bright sunlight
Click Value: 0.5 MOA

2.5x32 PRISM  
WITH ACSS-CQB M1

The Primary Arms 2.5x32 Compact Prism Scope with ACSS CQB-M1 reticle is the lightweight, do-everything scope you've been looking for. The wide field of view and etched reticle (with 11 optional red illumination brightness settings) allow for fast, both-eyes-open shooting at close range. The ACSS CQB-M1 reticle allows for hits on targets out to an impressive 600 yards. The included 1913 Mil-Spec Picatinny base can be removed, making the 2.5x32 Compact Prism Scope compatible with AR-15 carry handle mounts. The ACSS CQB M1 reticle is compatible with a wide variety of loads including 9mm and 5.56.

2.5x32 COMPACT PRISM SCOPE

Exit pupil: 10.2 mm	Length (w/o Lens Covers): 4.8"
Eye relief: 2.7"	Weight (w/ Battery, w/o Lens Covers): 14.9 oz.
Field of view: 37.5 feet @ 100 yards at 2.5x	Full reticle illumination in red, visible in bright sunlight
Click Value: 0.5 MOA

# SLx PRISM SCOPES

When you need a lightweight, trim scope that can do it all, our 3x32 Compact Prism Scopes are an ideal solution. Two ACSS CQB reticles are available, one calibrated for 5.56 / .308 / 5.45 and the other calibrated for 7.62x39 / 300 Blackout. The Generation II scopes feature a removable top mount 1913 Mil-Spec Picatinny rail, and a removable spacer built into the mount so users can tailor the scope height to both AK-47 and AR-15 platforms.

## 5x36 GENII-PRISM WITH ACSS-5.56

Our most powerful prism design, the 5x36 Prism Scope is still relatively fast to acquire for close quarters snap shooting, yet has the magnification needed to push your 5.56, .308, or 6.5 Grendel rifle all the way out to 800 yards using the classic ACSS reticle. Partial reticle illumination is selectable in red or green with five brightness levels powered by a single CR2032 battery. Like the 3x32 compact prism scopes, our 5x36 prism features a removable 1913 MIL-STD Picatinny top rail and modular base incorporating a removable spacer, making this a very popular choice on a variety of rifle types.

FINISH:

### 5x36 PRISM SCOPE

## WHAT YOU SEE SHAPES WHAT YOU’LL GET

The red dot sight dominates the American rifle market. It is impossible to know how many red dot-equipped carbines ride along in police cars, are carried by soldiers on patrol in faraway lands, and bust clay pigeons and ring steel at shooting ranges every weekend across the USA. Red dots are so popular that it is possible they outnumber all other scope types combined, at least on modern semi-automatic and military rifles. But the red dot isn't perfect, and it isn't the best optic for every shooter. The red dot plus magnifier combo battled the low power variable optic in this Scope University article, and now it must defend itself again. A new class of compact, lightweight 1x prism scopes are coming hard to knock the red dot off its throne. The Trijicon mini-ACOG, an old workhorse, has been rediscovered and is enjoying a surge in popularity as well. Should you stick with proven red dot technology, or switch to one of the upstart micro prism scopes? We are going to break it down for you, so sit up straight and pay attention--class is in session!

## HAIL TO THE KING - RED DOT SIGHTS

For the past 25 years the red dot sight (or reflex sight) has been the king of close quarters battle (CQB) type shooting. The technology involved has improved drastically over that time, but the optical theory is roughly the same as reflector gunsights used in fighter planes all the way back in World War II. A reticle created by reflected light located at the focus point of a lens appears to be placed steadily in front of the viewer's eye, focused at an infinite distance. You can move your eye around a large area behind one of these sights while still seeing the reticle. If you can see the reticle anywhere through the sight's window at all, superimposing it on top of your target will result in a hit with reasonable accuracy. Due to parallax error, at close range inside 25 yards it is technically better to keep the reticle centered in the middle of the red dot's field of view. However, that close range also

minimizes the impact of the parallax error--what might cause a completely missed target at 500 yards won't even be noticeable at 25 yards.

The red dot sight's biggest advantages are simplicity and speed of sight acquisition. The bright red (or sometimes green) dot reticle provides great contrast against the target and field of view in almost any lighting conditions, night or day. Manually adjustable brightness levels quickly fine-tune the reticle to suit the shooter's personal preference. Because there is no magnification, red dot shooting is done with both eyes open and focused on the target itself. This arrangement is the fastest sight

picture ever devised by modern science for aiming--whether the firearm is a .22 LR rifle out on the farm or the cannon in a F-22 fighter jet. The speed advantage continues to make a difference even after your shot flies down range. Placing a red dot sight on a high recoiling rifle allows for extremely fast sight re-acquisition as you bring the gun back into alignment after each shot. Mounted on self-loading firearms that exhibit little felt recoil, the red dot sight allows constant sight tracking as multiple rounds may be fired without losing the sight picture at all.

The simplicity of the red dot sight is also hard to beat. Military testing and experience has proven that new shooters find it much easier to learn basic marksmanship skills with red dots than with physical "iron sights". Iron sight shooting requires aligning three points--the rear sight, front sight, and target--and disciplining yourself to focus on the front sight even though this will blur the target. The red dot sight allows the shooter to instinctively focus on the target itself, yet still gain both speed and accuracy compared to iron sight shooting.

<https://www.primaryarms.com/blog/red-dots-vs-1x-prism-scopes>

The kings of speed for close quarters shooting. Red dot sights featuring bright and crisp dots or ACSS reticles, improved battery life, and are compatible with a wide variety of mounting systems. Primary Arms red dots are trusted by thousands of shooters.

SLxZ-25

Not too big and not too small, the all-new SLxZ-25 splits the difference between micro red dots and full-size units. Featuring a full 25mm of clear aperture, SLxZ-25 offers a wider field of view than older 30mm red dots in a physically smaller, lightweight package. Shooters can choose a standard 2 MOA dot or an advanced ACSS reticle, powered for up to 50,000 hours by a single CR2032 battery. SLxZ-25 is compatible with industry standard micro dot mounts. Engineered in Houston, Texas, SLxZ-25 pushes our red dot technology further than ever before.

We proudly continue to partner with Trijicon and Holosun. New co-branded products combine our ACSS reticles with their excellent optics, creating uniquely optimized products that take the performance of these optics to new levels.

# CO-BRANDED OPTICS

ACSS Aurora is the first Advanced Combined Sighting System reticle with bullet drop compensation calibrated in meters rather than yards. Packed with advanced features optimized for specific shooting situations methods, ACSS Aurora is introduced in the legendary 4x Trijicon TA31 ACOG. Available in either green or red reticle illumination, the TA31 requires no batteries for daytime or nighttime use. ACSS Aurora provides enhanced capabilities against fast moving targets and targets at unknown ranges, all in a proven scope familiar to law enforcement and veterans alike.

MPN: HS503G-ACSS

ACSS-CQB

Featuring automatic ranging and bullet drop compensation, this ACSS-CQB reticle can be surrounded by a large horseshoe at the user's discretion for ultra-fast sight acquisition at close range. The built in ranging and bullet drop compensation can be utilized by a wide variety of calibers.

Red dot magnifiers easily extend the effective range of your red dot. Compatible with a wide variety of mounting options, the magnifier is placed behind the red dot when needed to instantly add 3x or even 6x magnification to your field of view, with no adjustment needed on the red dot scope itself. Primary Arms magnifiers are a great way to maximize the capability of ACSS reticle equipped red dots, as well as providing an accuracy and confidence boost for shooters using standard red dots.

3x GENIII

3X RED DOT MAGNIFIER GEN III

Featuring 3X magnification and durable armored construction, this proven optic adds precise, long range ability to red dot sights.

SKU: PA3XGENIII  
MPN: 510001

3x LER-AD

ADVANCED 3X LONG EYE RELIEF RED DOT MAGNIFIER

The Advanced 3x Long Eye Relief Magnifier features a lifetime warranty and slim, light weight construction.

SKU: PA3XLER-AD  
MPN: 510002

3x GEN IV

3X LONG EYE RELIEF RED DOT MAGNIFIER GEN IV

Clear glass, great eye relief and a wider field of view make the GenIV 3x Magnifier a favorite option for serious shooters.

SKU: PA3XLERGENIV  
MPN: 510003

6x

6X RED DOT MAGNIFIER GEN III

The 6x Red Dot Magnifier Gen III provides maximum magnification to bring distant targets within the range of your favorite red dot sight.

SKU: PA6X  
MPN: 510004

**A** All hardware is made in the USA from high tensile strength alloy steel, heat treated to grade 12.9 specification and coated in mil-spec manganese phosphate to prevent corrosion.

**B** High strength M4 T15 Torx drive bolts (recommended torque 15-25 in-lb).

**C** 3/4" length top caps and main body feature relief cuts to avoid tube "pinching".

**D** CNC machined 6061-T6 aluminum alloy keeper, top caps and main body, coated with mil-spec type III class 2 hard coat anodizing.

**E** Removal of excess metal for weight reduction without sacrificing strength.

**F** High strength M5 T25 Torx drive bolts (recommended torque 55-65 in-lb).

**G** Grade 12 knurled press nuts are permanently press-fit into the mount body.

**H** HV300 hardened steel washers allow bolt torque to apply clamping force instead of just gouging the aluminum.

ECS™ System

The all-new Extreme Clamping System™ (ECS) is implemented in a full array of 31 scope rings, one-piece cantilever mounts, and red dot risers made with the best materials available using a clean-slate design. Our 3-bolt clamping systems with over 6,500 lbs of clamping force hold your scope firmly to the rail. Relief cuts designed into the scope tube bearing surfaces prevent scope pinching and ensure clamping forces are evenly distributed along the top and bottom of the scope body. Available in 1", 30mm, and 34mm tube sizes and industry standard micro red dot mounts in a variety of heights, ECS mounts lead the way in strength, stability and precision. We are so confident in these mounts they are covered under our excellent Lifetime Warranty.

# RIFLE SCOPE MOUNTS

We are excited to announce the creation of an all-new, American-engineered array of scope rings and mounts we call the Extreme Clamping System (ECS). Featuring USA-made mounting hardware made of the toughest materials available, ECS rings and mounts can safely apply 3x the torque of our previous mounts per cross bolt. 3 bolt ECS mounts hold the mount and rifle together with over 6,500 lbs of clamping force.

# MOUNTS

## PA1X-LM 1x20 PRISM LOW MOUNT

One size does not fit all. Our 1x20 Prism Scope with ACSS Cyclops reticle comes with an included mount perfect for use with AR-15s, but many shooters need a mount that positions the scope body as low as possible for use with AK-47s, shotguns, and other. Made from 6061-T6 aluminum and hardcoat anodized, PA1X-LM securely places the centerline of the 1x20 Prism Scope just 1.05" above the 1913 MIL-STD Picatinny rail. The mount's design is reversible, so the user determines whether the thumbscrew is configured to the left or right.

## THE BEST AR-15 SCOPE FOR THE MONEY MIGHT JUST BE TWO SCOPES

The challenge of balancing speed and accuracy is a huge part of what makes shooting a modern sporting rifle so much fun. Whether you are ringing steel at 600 yards from a Daniel Defense .308 or running through a close quarters tactical drill with an AK-47, the ambition is always the same—achieving the hits you need as quickly as possible. The best upgrades and accessories will help you put your sights on target faster, help you hit the target with greater precision, or help achieve both of those goals simultaneously. There are a ton of choices out there, so this battle is focused on two of the most popular configurations for the AR-15 carbine—the low power variable optic (LPVO) versus the red dot and magnifier combo.

A quality optic tops the list of the best AR-15 mods for boosting both speed and accuracy. For decades every AR-15 had fixed iron sights and that's what almost everybody used. Carry handle optics were considered an exotic luxury seen only with elite special forces units and the occasional oddball civilian shooter. Today it is rare to see anyone shooting an AR with iron sights only unless they are a retro builder or just starting out with a brand-new rifle. Chat with one of these shooters at the range and they will usually tell you all about which scope they plan on buying! The hot question now isn't whether AR-15 scopes are good idea, but which configuration is the best rifle scope for the money.

## BACK IN BLACK - LOW POWER VARIABLE SCOPES

Low power variable optics use an etched reticle that your eye sees as a black shape contrasted against the field of view. In more advanced LPVOs, the reticle may be illuminated by battery power, fiber optics, or some other light source. Unlike the red dot's reflected light projection reticle, the LPVO's etched reticle is always present regardless of battery status, although without illumination they can be difficult to use in low light conditions or at night. The science behind etched reticle optics also means LPVOs must cope with visual limitations that just aren't a factor with red dots. For example, "eye relief" defines the distance between the ocular lens at the rear of the scope and the ideal placement of your eye. If a LPVO scope has an eye relief of 3.5 inches, placing your eye just 1 inch behind the lens results in an unusable sight picture. Placing your eye 5 inches behind the lens also results in, you guessed it, no sight picture. "Exit pupil" is the diameter of the shaft of light coming out of the ocular lens, which your eye must line up with to see that etched reticle correctly and take an accurate shot. Move your head too much up or down, side to side, and you'll see the reticle distort with odd crescent-shaped shadows appearing in the sight picture just before the view goes completely black. The overall space where your eye can acquire the reticle correctly, allowing you to take an accurate shot, is called the "eye box". Eye box is difficult to quantify. No manufacturer can put a number on it, but for fast shooting up close a good eye box is absolutely essential in a LPVO. Exit pupil, and therefore eye box, is dependent on the size of the front or objective lens compared to the magnification setting of the scope. At 1x the eye box on a quality LPVO will be so large and forgiving that it is possible to shoot with both eyes open like a red dot, and almost as quickly. At higher magnifications the eye box will get smaller, your point of aim will seem much more sensitive, and it will take more time to aim your rifle.

## LIFETIME WARRANTY:

The Primary Arms lifetime warranty protects your investment in our company and our products. No proof of purchase is required—it doesn't matter where you got it from, if a lifetime warranty product is in your hands, the warranty applies to you. And it really applies—unlike other lifetime warranties you've seen, the Primary Arms lifetime warranty doesn't just apply to "manufacturer defects". Manufacturer defects are either already present when the product is new in the box, or they aren't. That doesn't sound like much of a lifetime warranty to us, so we also cover normal wear and tear. If you manage to shoot enough to wear out a lifetime warranty scope, and it stops performing to its original specifications, we will repair that function at our headquarters in Houston, Texas. If we can't repair it, we'll replace your scope with an identical (if possible) or substantially similar scope, free of charge. It doesn't matter if you've had the scope for ten days or ten years—it's protected for life.
