

SWITCHVIEW™

ZOOM THROW LEVER

Compatible with Magnification Rings with a Diameter of 1.739 Inches (44 mm)

Installation Instructions

Attention: Ensure firearm is completely unloaded before making any modification. Unload, check inside the chamber, and remove any ammunition from the area.

1. Properly mount your riflescope and have the Switchview ring, lever, screw, wrench, and some lubricant available.
2. Find the center of travel on your riflescope's magnification adjustment ring and place a small mark at this point as a reference for positioning (Step 6).
3. Apply one drop of lubricant to the ball of the Switchview ring.
4. Slide the Switchview ring over the eyepiece and onto the magnification ring.
 - » Gently spread the ring apart—just far enough to get it over the eyepiece and/or around the illumination knob.
5. Carefully insert the ball of the Switchview ring into the socket of the lever by GENTLY working the lever onto the lubricated ball.
Note: Precise tolerances ensure the ball and socket fit together very tight.
6. Insert the Allen Screw through the unthreaded hole in the lever and into the ring (3-A) and tighten only until SNUG and doesn't slip when rotated. If you use a torque wrench, tighten to 2.2 inch-pounds. When properly installed, a gap will remain between the two parts at the screw connection. *Caution: Do not over-tighten. Over-tightening may cause damage to the Switchview and/or riflescope.*
7. Test to ensure the Switchview lever is in the best position for you. To adjust, simply loosen the screw and reposition the lever to a more comfortable position. Then, retighten the screw and test the new position.
